AIS (American Iron and Steel) Requirements for Clean Water and Drinking Water SRF loans

David Dunn, PE, Department of Ecology Janet Cherry, PE, Department of Health Rick Green, EPA Region 10

AIS (American Iron and Steel)

- Agenda
 - Who has to comply?
 - What are the requirements?
 - What products does this apply to?
 - What are the waivers and exceptions?
 - What kind of documentation do I need?

The AIS requirement

"No SRF funds shall be used for a project for the construction, alteration, maintenance, or repair of a public water system or treatment works unless all of the iron and steel products used in the project are produced in the United States."

Who Does AIS Apply To?

- Any project funded in whole or in part with SRF loan funds
- Construction, alteration, maintenance, or repair of a public water system or treatment works
- The entire project
 - · no matter when construction begins or ends
 - · Including partial funding

What is a project?

- A "project" consists of all construction necessary to complete the building or work
- May involve multiple contracts or loan agreements.
- "closely related in purpose, time and place".

What products are covered?

- Only Iron and Steel Products
 - primarily of iron or steel
 - more than 50% iron or steel
 - based on the material costs
 - Permanently incorporated into the project.
- Does not include mechanical or electrical components

Temporary Items

- <u>Temporary Items</u> are not required to be made of U.S. Iron or Steel
 - For example:
 - trench boxes
 - scaffolding or equipment
 - Other temporary items necessary to the project that are removed from the site upon completion.

What does "produced in the united states" mean?

- All <u>manufacturing processes</u>, must take place in the United States
- including application of internal linings,
- But not metallurgical processes involving refinement of steel additives

Manufacturing Processes

- melting,
- · refining,
- forming,
- · rolling,
- · drawing,
- · finishing,
- · fabricating, and
- · Coating.

Manufacturing Processes

- If any part of the manufacturing process occurs outside of the US, it becomes foreign product.
- Raw materials are not covered by the AIS requirement,
 - iron ore, limestone and iron and steel scrap
 - exterior coating material(s)
 - · pig iron and direct reduced iron
- Non-iron or steel components of an iron and steel product may come from non-US sources.
 - valves and hydrants
- AIS does not apply to re-used items.

Other domestic preference legislation Don't Get Confused.

- Buy American Act
- But America Act (DOT projects)
- American Reinvestment and Recovery Act
- Trade Agreements
- Source of Raw materials?
- "all" or "substantially all"?
- US corporations or US workers?

Specific Products

Products Specifically Mentioned in the AIS requirement

- Lined or unlined pipes or fittings;
- Manhole Covers;
- Municipal Castings*;
- Hydrants;
- Tanks;
- 6. Flanges;
- 7. Pipe clamps and restraints;
- 8. Valves;
- Structural steel^{*};
- 10. Reinforced precast concrete*; and
- 11. Construction materials.

Municipal Castings

- Cast iron or steel products
- melted and cast
- typically provide access, protection, or housing for components
- Typically made of grey iron, ductile iron, or steel.

Examples of municipal castings

- Access Hatches;
- · Ballast Screen;
- Benches (Iron or Steel):
- Bollards;
- Cast Bases;
- Cast Iron Hinged Hatches, Square and Rectangular;
- Cast Iron Riser Rings;
- Catch Basin Inlet:
- Cleanout/Monument Boxes;
- Construction Covers and Frames; · Curb and Corner Guards;
- Curb Openings;Detectable Warning Plates;
- Downspout Shoes (Boot, Inlet);
- Drainage Grates, Frames and Curb Inlets;

- · Junction Boxes;
- Lampposts;
- Manhole Covers, Rings and Frames, Risers;
- · Meter Boxes;
- · Service Boxes;
- Steel Hinged Hatches, Square
- and Rectangular;
- Steel Riser Rings;
- · Trash receptacles;
- · Tree Grates:
- · Tree Guards; · Trench Grates: and
- Valve Boxes, Covers and Risers.

Structural steel

- Structural steel in rolled or flanged shapes
- I-beams, channels, angles, tees and
- One dimension of their cross-section three inches or greater

Reinforced precast concrete

- The casting of the concrete product must take place in the US.
- We know that reinforced precast concrete is not 50% iron or steel, but it is specifically called out in the law.
 - Includes PCCP pipe
- The reinforcing bar and wire must be produced in the US
- The cement and other raw materials not required to be from the US.

Construction materials

- Construction materials are permanently incorporated into the project
- Construction Materials do not include mechanical and/or electrical components, equipment and systems.
- May overlap with what is also considered "structural steel".

Examples of Construction materials

- wire rod,
- · bar, angles,
- concrete reinforcing bar,
- wire.
- wire cloth,
- wire rope and cables,
- tubing,
- framing,
- joists,
- trusses,
- fasteners (i.e., nuts and bolts),
- welding rods,
- decking,
- grating, railings,

- stairs,
- access ramps,
- fire escapes ladders.
- wall panels,
- roofing, ductwork,
- surface drains,
- cable hanging systems,
- manhole steps, fencing and fence tubing,
- guardrails,
- doors, and
- stationary screens.

Exceptions & Waivers

- Exceptions
 - Loan execution
 - Design approval
- Waivers are available on a product by product basis.
 - The SRF agency must file the application for a waiver.
 - Full documentation must be provided by the loan recipient.

Exceptions

- Prior Design Approval
 - If your plans and specs were approved prior to April 15, 2014
 - · Approval was by the state agency under normal course of business
 - OR bid advertisement date prior to April 15, 2014

All AIS requirements for the project are waived

Exceptions

- Prior Loan signature
 - If your loan agreement was signed prior to January 17, 2014, AIS requirements do not apply to the project
- This only applies to the project funded by that
 - · If a new loan for a following phase, it may include the AIS requirements

Waivers

- When to apply for a waiver
 - As soon as possible
 - Iron and steel products should be evaluated during design
 - Pre-bid conferences can identify domestic availability
 - EPA has not committed to a timeline on waiver response; could be up to 6 weeks
 - There is a required 15 day public comment period

Types of Waivers

- Public interest
 - Application must show that the AIS requirements would be inconsistent with the public interest
- Product waivers
 - · Waiver application must show that domestic iron and steel products are not produced:
 - in sufficient and reasonably available quantities, or
 - of a satisfactory quality
 - · i.e. you can not get the product you need from US sources
- - Waiver application must show that the AIS requirement will increase the cost of the overall project by more than 25

How to apply for a waiver

- · Communicate with your state contact
- If a waiver is advisable prepare a letter
 - · Agency letterhead
 - · Directed to state agency
 - · Fully explain need and justification for the waiver
- State will work with you to refine and improve the
- State contact will submit the waiver request to EPA

Our Waiver Experience

- Most waivers issued are product waivers
- DOH emergency waiver
- City of Spokane plug valve public interest waiver
- National Waiver for Stainless Steel Nuts and Bolts used in Pipe Couplings, Joints, Flanges, etc.
- National de minimis waiver
- http://water.epa.gov/grants_funding/aisrequirement.cfm

de minimis waiver

- National waiver issued for de minimis items.
- de minimis items are:
 - incidental components
 - Low cost, miscellaneous character, procured in bulk
 - Washers, screws, fasteners, wire, corner bead, ancillary tubing, etc.
- - Cumulative cost less than 5% of the total material cost of the project.
- Any individual item less than 1% of the total material cost of the project
- To use the *de minimis* waiver you must document:
 - Specific de minimis items
- Project total <u>material cost</u>

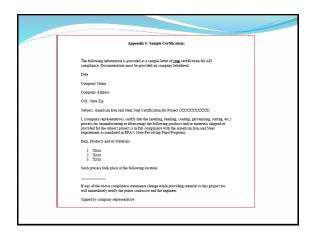

Document Document

AIS Required Documentation

- Step certification.
 - Documentation of each step in the manufacturing process
 - · Each handler certifies their step(s) took place within the
 - · Creates a paper trail back to raw materials
- Certifications must state:
 - · the name of the manufacturer,
 - · the location of the manufacturing facility where the product or process took place (not its headquarters)
 - · a description of the product, item, or process
 - a signature by a manufacturer's responsible party

AIS Required Documentation

- Certification examples:
- 1. A refines iron ore, forms and rolls I-beams at their facility
 - One certification from A
- B refines iron ore to ingots. C melts the ingots and centrifugally casts ductile iron pipe. D applies an external coating to the pipe. E applies a glass lining to the pipe
 - 4 steps, 3 need certifications. (B, C and E)process
 - No certification required for external coating.
 - No certifications for the raw materials. Ore, glass frit, coating, etc.
